	Urgent	Not Urgent
Important	**Do - (Your MVP)** ● API request with dining court, date, and each item. ● Check high-FODMAP foods. ● Create a high-FODMAP trigger list. ● Print out menu with low-FODMAP foods.	**Schedule - (For V2.0+)** ● Suggests a full low-FODMAP meal. ● Turning it into an app. ● Notification for when to eat.
Not Important	**Delegate - (Use a library)** ● HTTP requests. ● XML/JSON parsing. ● The date.	**Delete - (Cut it)** ● Calorie/macro tracker. ● Fitness tracker. ● Rating dishes. ● Get the remaining time to eat and shorten meal

```
DO:   Get the dining court and the date
      API request for that dining court on that date
      API request for each item's ingredient list
            If ingredient doesn't have list, then compare the whole food
      For each item
            Check each ingredient with high-FODMAP ingredient list
            If ingredients are not in list
                  Put item into "Eatable" list
      Print out eatable list
```
